COMMISSIONERS	STAFF
Dr. Felicia Y. Blasingame	Terry A. Solomon, Ph.D. Executive Director
Dr. Seymour Bryson	Joe Gray, CPA Deputy Director of Finance, Information & Administration
Ms. Patricia A. Carpenter	
Dr. Ida E. Cross-Pruitt	Patrushka Sampeur-Thigpen, MSW Community Outreach Specialist
Ms. Margaret Davis	
Rev. James Gordon	Susan Smith-Ross, Esquire Public Policy & Research Specialist
Ms. Reanetta Hunt	Sonja Foster, MA, MS Legislative Liaison
Mr. Jesse D. Madison, Chair	
Ms. Dian Powell, Secretary	Tayisha Nelson, MS Legislative Liaison
Dr. George E. Smith	Charles Dugbo, BSC Accountant
	Mary Smith Program Assistant
	Sabrina Foster, BGS Executive Assistant

THE ILLINOIS AFRICAN-AMERICAN FAMILY COMMISSION

The Illinois African-American Family Commission was established by Public Act 093-0867 to assist various state agencies to improve and expand existing human services and educational and community development programs for African-Americans.

This will be accomplished by:

1. Monitoring existing legislation and programs designed to address the needs of African-Americans in Illinois

2. Assisting State agencies in developing programs, services, public policies and research strategies that will expand and enhance the social and economic well-being of African-American children and families, and

3. Facilitating the participation of African-Americans in the development, implementation, and planning of community-based services.

OUR MISSION

The Illinois African-American Family Commission develops, evaluates and advocates for public policies, plans, research and programs that will strengthen and preserve families, family economics, workforce participation, health status, safety, education and training, and quality of life for African-Americans.

OUR VISION

The Illinois African-American Family Commission is a catalyst that facilitates partnerships between governments and communities to ensure a safe, healthy and secure environment for African-American children and families, throughout the state of Illinois.

Table of Contents - Demographic Profiles of Illinois Counties (Continued)

Introduction

More now than in the past, low-income families are on the move throughout the United States. In a time where residential mobility rates for higher-income families are approaching record lows, low-income families continue to remain on the move. One of the issues facing communities, scholars, and practitioners is how to make sense of this mobility, both as a phenomenon in and of itself and also in relation to the communities which it impacts.

This data guide serves as a starting point for more detailed exploration of these issues. By consolidating information from a wide variety of sources, this guide serves as a beginning point for more targeted exploration of mobility within the context of community. One of the primary barriers to understanding mobility in context is that data often lags far behind what communities experience as part of everyday life. This data resource seeks, whenever possible, to consolidate the most up-to-date community data that is available. This compendium is designed to allow users to look up information about every county in Illinois, and simultaneously provides an index that compares county-level attributes with the state as a whole.

As such, this guide allows users to "connect the dots" by examining where low-income assisted households are moving in relation to the local attributes of each community. This guide is in no means meant to be a source of causal information, but is meant to serve as an exploratory resource and jumping-off point.

Assisted Housing Mobility

While current data resources make it extremely difficult to answer the question of where low-income households are moving to and from in Illinois, it is more feasible to examine the subpopulation of low-income households who make moves with Federal housing assistance. The Federal Housing Choice Voucher Program (HCVP) is currently the largest low-income housing program in the nation, serving more than 2 million households annually, and more than 70,000 households in Illinois. The HCVP, sometimes referred to as tenant-based Section 8 housing, provides participating low-income households with the ability to rent a market-rate unit on the private rental market with a subsidy to make the unit affordable to their income level. Tenants in the HCVP pay 30% of their gross income in rent, with federal dollars subsidizing the difference between the tenant's rent payment and the market value of renting the unit. As such, landlords who rent to HCVP tenants receive two payments monthly - one from the tenant and one from the local housing authority which administers the program on behalf of HUD.

Unlike most other assisted housing programs including public housing, Project-Based Section 8, and Low Income Housing Tax Credits, Housing Choice Vouchers (HCVs) are transportable with the tenant. As such, a participating voucher household can move locally or nationally with their voucher. This unique ability to "port" in between housing authority jurisdictions with a housing voucher serves as the basis for the low-income housing mobility data presented in this document. This document provides basic information on the county-level assisted housing landscape, reporting the number of public housing, project-based, and housing voucher units present within a given county. A separate analysis for each county provides information on assisted housing mobility and the number of voucher households who have moved in and out of each county using their HCV.

Community Context

In addition to county-level data on assisted housing mobility, this guide also presents information on the local community context within which this mobility occurs. Following the initial page of demographic and assisted housing information for each county is a county level index that reports on a number of key community indicators reflecting issues such as housing, racial and economic segregation, labor force, community health, environmental health, crime, and human capital. These indicators are designed to serve as waypoints for the beginning of more targeted exploration of community demographics and dynamics. In addition to reporting the respective value for each indicator, indicators are scored in relation to state averages. Negative scores on the index indicate values that are less desirable in relation to the state average, and positive score indicate values that are more desireable in relation to the state average.[1] The index also presents an average score across all indicators. This index is meant to provide some basic context for the understanding of community-level opportunity, particularly as it relates to opportunity throughout the state of Illinois as a whole.

---

[1] Index scores were calculated by finding the standardized score for each county with respect to the state average. Scores were ranked as follows: -3: < -2.5 σ^2, -2: -2.5 σ^2 to -1.5 σ^2, -1: -1.5 σ^2 to -0.5 σ^2, 0: -0.5 σ^2 to 0.5 σ^2, 1: 0.5 σ^2 to 1.5 σ^2, 2: 1.5 σ^2 to 2.5 σ^2, 3: .> 2.5 σ^2.

[2] The estimate of public housing units in Cook County underrepresents the number of public housing units in the city of Chicago due to a Moving To Work Agreement between the Chicago Housing Authority and HUD. HUD estimates a total of 22,577 ACC units of public housing under the authority of the Chicago Housing Authority for this time period.

Data Dictionary

County Seat

Data Description:
Center of government for each county.

Data Source:
National Assosciation of Counties

Data Link: http://www.naco.org/

Data Update Date: 2010

Demographic Data

Data Description:
Demographic data was sourced primarily from the 2006-2008 American Community Survey (ACS). The ACS is a national survey sampling from the general population on an annual basis. Conceptually, the ACS will serve as a replacement for the decennial Census and will provide detailed demographic data covering the entire United States. For some less populous counties, ACS data is not currently available. For those Illinois counties where 2006-2008 ACS data was unavailable, 2000 Decennial Census data is reported.

Demographic Data Reported

Total Population: The total population for the county
Males / Females: The proportion of the population reporting their gender as male or female
Median Age: The median age of the population
% Under 5: The percent of males and females in the population that were under the age of five at the time of enumeration.
% Over 18: The percent of males and females in the population that were over the age of 18 at the time of enumeration.
% over 65: The percent of males and females in the population that were over the age if 65 at the time of enumeration.
Race: The number and proportion of the population reporting themselves as belonging to a specific racial identity.
Latino: The number and proportion of the population reporting latino ethnicity.

Data Source:
2006-2008 American Community Survey or 2000 Decennial Census (as Noted)

Data Link: www.census.gov

Data Update Date: 2000 or 2008 (as noted)

Assisted Housing Program

Data Description:
The number of assisted households as of April, 2010 participating in a given assisted housing program. Public Housing assisted households represent a count of those individuals living in Public Housing Authority owned units. Housing Choice Voucher assisted households represent a count of households participating in the Housing Choice Voucher Program (tenant-based Section 8) who recieve a voucher-based rental subsidy to rent housing on the private market. Project-based Section 8 assisted households represent those households living in units that have a subsidized rent attached to the unit. Unlike tenant-based vouchers which stay with the tenant when they move, project-based vouchers are tied to the housing unit itself, and stay with the unit when a tenant leaves. Other HUD-Assisted Housing households assisted represent those households participating in other HUD assisted housing programs such as the Section 8 Mod Rehab and Section 8 Mod Rehab SRO programs.

Data Update Date: March, 2010

Housing Choice Voucher Program History

Data Description:
The Federal Housing Choice Voucher is currently the nation's largest low-income housing progran serving more than 2 million households nationwide on an annual basis. Housing Choice Vouchers (sometimes referref to as tennant-based Section 8 housing) allow low-income households to rent units on the private rental market. The Federal Housing Choice Voucher works by subsidizing the difference between an affordable share of the low-income tenant's income (typically 30%) and the cost of renting the unit to a market-rate tenant. Unlike Public Housing and Project-Based Section 8 units, vouchers move with the tenant, both locally and nationally, provided that a local Public Housing Authority has the ability to administer the voucher. Moves in between housing authority jurisdictions are called Portability Moves. The data reported in this fact book indicate the cumulative number of portability moves in and out of each county for the years 2000-2007. Also reported are the cumulative number of households participating in each county's Housing Choice Voucher program between 2000 and 2007.

Foreclosure Rate

Data Description:
The U.S. Department of Housing and Urban Development's Neighborhood Stabilization Program maintains estimates of local foreclosure rates in order to help local governments to acquire and redevelop foreclosed properties that might otherwise become sources of abandonment and blight within their communities. HUD utilizes data from the Mortgage Bankers Nationals Delinquency Survey as a basis to model the number of foreclosure starts at a local level for the time period January 2007 through June 2008.

Data Source:
U.S. Department of Housing and Urban Development: Neighborhood Stabilization Program Foreclosure Database

Data Link: http://www.huduser.org/datasets/nsp.html

Data Update Date: June, 2008

High Cost Loan Rate

Data Description:
The High Cost Loan Rate provides a proxy for predetory lending activity. The High Cost Loan Rate reflects the estimated number of conventional loans made between 2004 and 2006 where the loan rate spread exceeded 3 percentage points above the Treasury security of comparable maturity.

Data Source:
U.S. Department of Housing and Urban Development: Neighborhood Stabilization Program Foreclosure Database

Data Link: http://www.huduser.org/datasets/nsp.html

Data Update Date: June, 2008

Residential Vacancy Rate

Data Description:
The residential vacancy rate reflects the number of housing units that are vacant. The vacancy rate serves as one indicator that can provide insight into the "health" of a local housing market. Vacancy rates can reflect not only the amount of turnover being experienced locally, but can also help fill in the picture of overall consumer investment and disinvestment in a local housing market. These data come from the U.S. Department of Housing and Urban Development's United States Postal Service Vacancy Database. The Postal Service collects and reports data on residential housing units that have been vacant (based upon mail delivery and forwarding data) for longer than 90 days.

Data Source: U.S. Department of Housing and Urban Development: United States Postal Service Address Vacancy Database

Data Link: http://www.huduser.org/portal/datasets/usps.html

Data Update Date: First Quarter, 2010

Dissimilarity (Race)

Data Description:
The index of Dissimilarity is a demographic measure that examines the distribution or segregation of two groups across a geogrpahic area. In the case of racial dissimilarity, presented here, the index score reflects the percentage of African-Americans within the county that would have to move from their current residential location in order to produce a geographic distribution similar to that of Caucasian residents within the county. The index of dissimilarity is calculated based upon Census Tract geographies. As such, a Dissimilarity Index score of .45 would indicate that 45% of African-Americans would have to move to a different Census Tract within the same county to achieve the same proportional distribution as Caucasians in the county.

The formula for the calculation of African-American racial dissimilarity is:

$$\frac{1}{2}\sum_{i=1}^{N}\left|\frac{b_i}{B} - \frac{w_i}{W}\right|$$

Where:
b_i = the African-American population of the ith census tract
B = the total African-American population of the county
w_i = the white population of the ith tract
W = the total white population of the county

Data Source: Calculations based off of population data from 2000 Decennial Census

Data Link: Census SF-3

Data Update Date: 2000

Dissimilarity (Poverty)

Data Description:
The index of income dissimilarity examines the segregation of low-income households from their higher income counterparts in each county. In the case of income dissimilarity, presented here, the index score reflects the percentage of poverty households within the county that would have to move from their current residential location in order to produce a geographic distribution similar to that of non-poor households within the county. The index of dissimilarity is calculated based upon Census Tract geographies. As such, a Dissimilarity Index score of .25 would indicate

that 25% of households living below the poverty line would have to move to a different Census Tract within the same county to achieve the same proportional distribution as non-poor households in the county.

The formula for the calculation of poverty-wage dissimilarity is:

$$\frac{1}{2}\sum_{i=1}^{N}\left|\frac{b_i}{B} - \frac{w_i}{W}\right|$$

Where:

b_i = the below-poverty population of the ith census tract
B = the total below-poverty population of the county
w_i = the above poverty population of the ith tract
W = the total above poverty population of the county

Calculations based off of population data from 2000 Decennial Census

Data Link: Census SF-3

Data Update Date: 2000

Unemployment Rate

Data Description:
The Unemployment Rate serves as a key indicator of local economic health. The unemployment rate reflects the estimated percent of the population of working age that is currently unemployed. These data are calculated as part of the Bureau of Labor Statistics' Local Area Unemployment Statistics (LAUS) program which combines data from several sources including the Current Population Survey, the Current Employment Statistics program, and state-level Unemployment Insurance claims data to estimate at the county level the current number of unemployed individuals.

Data Source: U.S Bureau of Labor Statistics: Local Area Unemployment Statistics

Data Link: http://www.bls.gov/lau/

Data Update Date: April, 2010

Living Wage (2 Adults 2 Kids)

Data Description:
The living wage estimates the minimum income neccesary to afford minimum standards of living. This estimate is designed to provide a minimum stimate of the cost of living for low-wage families, and represents an hourly wage neccesary to support 2 working adults with 2 dependent children. Living wage estimates are based upon a model developed by the Evonomic Policy Institute's metropolitan living wage tool.

Data Source: Poverty In America: Living Wage Calculator

Data Link: http://www.livingwage.geog.psu.edu/

Data Update Date: 2008

Business Vacancy Rate

Data Description:
The business vacancy rate reflects the number of vacant business addresses. While the vacancy rate does not provide insight into the size or industry of vacant business space, it does provide some insight into local economies and job markets, and whether local areas are loosing or gaining businesses and employment. These data come from the U.S. Deparment of Housing and Urban Development's United States Postal Service Vacancy Database. The Postal Service collects and reports data on business addresses that have been vacant (based upon mail delivery and forwarding data) for longer than 90 days.

Data Source:
U.S. Department of Housing and Urban Development: United States Postal Service Address Vacancy Database

Data Link: http://www.huduser.org/portal/datasets/usps.html

Data Update Date: March, 2010

Toxic Release (N and #)

Data Description:
Toxic release statistics reflect the amount of federally-identified toxic material released into the local environment via air and water. Toxic releases tracked by the United States Environmental Protection Agency (EPA) from factories and businesses are reported both based upon the distinct number of cumulative air and water releases (N) as well as the cumulative number of pounds of toxic waste released into the local environment (#)

Data Source: U.S. Enviornmental Protection Agency: Toxics Release Inventory

Data Link: http://www.epa.gov/tri/

Data Update Date: April, 2010

Children < 6 Years of Age With Elevated Lead

Data Description:
Childhood lead poisoning tends to disparately impact African-American children in Illinois. The majority of lead poisoning cases in the state can be linked to the presence of lead-based paint in homes constructed before 1978. The symptoms of lead poisinging are often mistaken for the cold or the flu, but can result in a number of serious health problems including learning disability, mental retardation, behavioral problems, lowered intelligence, stunted growth, and hearing impairment. These data

from the Illinois Department of Public Health report the proportion of children under age 6 tested for elevated blood levels in 2007 who tested positive for elevated or dangerous levels of lead.

Data Source:
Illinois Department of Public Health: Illinois Lead Program Surveillance Report - 2007

Data Link: http://www.idph.state.il.us/envhealth/pdf/Lead_Surv_Rpt_07.pdf

Data Update Date: 2007

Asthma %

Data Description:
The estimated percentage of adults in each county who have ever been diagnosed as having Asthma.

Data Source:
Illinois Behavior Risk Factor Surveillance System

Data Link: http://app.idph.state.il.us/brfss/

Data Update Date: 2009

Diabetes %

Data Description:
The estimated percentage of adults in each county who have been diagnosed as having diabetes.

Data Source:
Illinois Behavior Risk Factor Surveillance System

Data Link: http://app.idph.state.il.us/brfss/

Data Update Date: 2009

Health Care Coverage %

Data Description:
The estimated percentage of adults in each county who report having regular health care coverage.

Data Source:
Illinois Behavior Risk Factor Surveillance System

Data Link: http://app.idph.state.il.us/brfss/

Data Update Date: 2009

Infant Mortality

Data Description:
The infant mortality rate (deaths per 1,000 births) for each county. Elevated rates of infant mortality tend to reflect both unhealthy lifestyles and distressed living conditions. Infant mortality data comes from the Illinois Department of Public Health.

Data Source:
Illinois Department of Public Health: Infant Mortality Numbers by County

Data Link: http://www.idph.state.il.us/health/infant/infmort0507.htm

Data Update Date: 2007

Births to Teens (%)

Data Description:
The births to teens statistic reflects the percent of all ive births in a given year that are attributed to mothers under the age of 20. Teen pregnancy tends to result in poorer "life outcomes" for both teenage mothers and their children. In addition to social stigma, teen mothers also experience on average lower levels of education and higher rates of poverty.

Data Source:
Illinois Department of Public Health: Total Number of Babies Born to Illinois Teenagers

Data Link: http://www.idph.state.il.us/health/statshome.htm

Data Update Date: 2007

Murder

Data Description:
The murder statistic represents the number of individuals (per 1,000) reported by police as having been murdered within a given year. Data are reported by local police officials and are then geographically aggregated to the county level.

Data Source:
United States Federal Bureau of Investigation: Uniform Crime Report 2008

Data Link: http://www.isp.state.il.us/crime/ucrhome.cfm

Data Update Date: 2008

Robbery

Data Description:
The robbery statistic represents the number of robberies (per 1,000 memebers of the population) reported by police. Data are reported by local police officials and are then geographically aggregated to the county level.

Data Source:
United States Federal Bureau of Investigation: Uniform Crime Report 2008

Data Link: http://www.isp.state.il.us/crime/ucrhome.cfm

Data Update Date: 2008

Burglary

Data Description:
The burglary statistic represents the number of burglaries (per 1,000 members of the population) reported by police. Data are reported by local police officials and are then geographically aggregated to the county level.

Data Source:
United States Federal Bureau of Investigation: Uniform Crime Report 2008

Data Link: http://www.isp.state.il.us/crime/ucrhome.cfm

Data Update Date: 2008

Adult Population 25 and older without a high school degree

Data Description:
This statistic reflects the number of adults aged 25 or older who report having not received a high school diploma or GED equivalent.

Data Source:
United States Decennial Census 2000: SF-3 (Table P37)

Data Link: www.census.gov

Data Update Date: 2000

Workers 16 years and over who worked outside of county or state of residence

Data Description:
This statistic reports the number of working-aged adults who currently work outside their county or state of residence. This statistic provides some insight into the presence of employment within a local area, as well as the match between worker skillset and local employment opportunities.

Data Source:
United States Decennial Census 2000: SF-3 (Table P26)

Data Link: www.census.gov

Data Update Date: 2000

Workers 16 and over spending more than 60 minutes commutng to work

Data Description:
This statistics reports the number of working-aged adults who spend more than 60 minutes commuting in one direction to work. This statistic provides some sense of the time cost of commutes as well as a sense of job accessibility. High proportions of workers with long commutes can indicate a lack of locally accessible jobs, which can form a barrier to successful employment, particularly for workers without steady means of transport to work.

Data Source:
United States Decennial Census 2000: SF-3 (Table P31)

Data Link: www.census.gov

Data Update Date: 2000

Households with No Vehicle Available

Data Description:
This statstic reports the proportion of households with no vehicle available for use. This statistic serves as a means of measuring transit dependence. For those individuals living in areas with inadequate or no public transit service, lack of regular access to a vehicle may indicate a significant barrier to successful employment, as well as restricted access to social and familial networks.

Data Source:
United States Decennial Census 2000: SF-3 (Table H44)
